

## NATURAL SCIENCES: SENIOR PHASE

*“Grab that teaspoon, lemon, salt, vinegar, food dye, nail, foil, milk bottle, red cabbage, torch..... etc. and become your child’s best garage Scientist”*

**NB:** *But make sure the Fire-Brigade has been notified first .....* 🚒

- COVID-19 is transmitted through contact, air, sharing of contaminated objects, closeness to the next person etc. This is bad news for your inquisitive bundle of joy who loves doing those educative/explosive laboratory experiments.
- To protect our learners from exposure in the laboratory experiment through group work or sharing of apparatus, teachers will now only do demonstrations 😭
- Dear mum/dad grab the science teacher’s number, ask for relevant science experiment worksheets, safety precautions, common alternative home apparatus and chemicals and make that children love science again and soon you will find yourself fixing the broken plug fuse on your own.
