

Effective Resource Utilisation

Resources make the educational process more attractive and interesting, encouraging active learning, development of different skills and adoption of desirable values and attitudes of learners. They assist teachers with the presentation and transmission of educational content and the achievement of educational objectives, whilst aiding students in acquiring knowledge and profiling different abilities and values.

During Covid19 period, learners go to school on rotational basis. It is imperative that they be furnished to different leaning resources and platforms. These include TV, Internet, learning apps/links and websites such www.nect.za/materials. Teachers are encouraged to teach parents and learners on how to connect to these resources.
