Due to the rotational basis of attending school to observe social distancing during the COVID-19 pandemic, your child may not be attending school daily. As you try to support your child at home, the topics to work on for the next two weeks are: common fractions and decimal fractions. The skills to focus on include **comparing** fractions, **adding, subtracting, multiplying** and solving **word problems** involving fractions. Encourage them to **practise** these skills daily. Use the available learning materials for reference, particularly the **DBE workbook**.
