

**Dear Parent /Guardian**

One of the benefits of the current lockdown is the opportunity for learners to learn from home. Science is a diverse and practical subject that learners can benefit from even in the home set up.

The activity for this week is to:

- Identify** conductors and insulators from all the household equipment
- Draw and write** to trace how the electricity comes from the power station to our homes/schools, including power station, pylons, substation, electricity boxes, wall sockets, plugs and appliances.
- Allow learners to visit a local substation and follow how electricity reaches the home/household.

Always remember that, “The unexamined life is not worth living”.

Thank you

Justine
