

Mathematics Inter-Sen Phase

Richard Marumani

4 December 2020

Revision

As the year drifts to the end, a number of fundamental topics, concepts and skills have not been covered in great depth due to the COVID-19 pandemic. Learners therefore need to be assisted at home to close the concept gaps in topics such as fractions, data handling, multiplication, division, measurement (focussing on area, perimeter and volume) and time. Senior phase learners should focus mainly on graphs, algebraic equations, integers, surface area and volume. Teachers should prepare worksheets which learners will use at home with the help of parents and guardians during the holiday break. DBE workbooks and other textbooks could be used to compliment the worksheets.

Wishing you all a restful, safe and enjoyable Christmas holiday.
