Whole Numbers Measurement

Welcome to 2021. I hope you are all safe at home. This is a reminder for learners to revise key concepts on whole numbers which is the core of all other topics. Parents should help their children to familiarise themselves with work done in previous grade or term to understand basic ideas such as counting in intervals, ordering, comparing, representing, rounding off and place value.

If they can master the basic ideas of numbers this will help them acquire more operational skills such as addition, subtraction, multiplication and division in different contextual situations.

Wishing you all the best in the coming school term.
