Topic: Remote and Digital Learning

Message Objective(s):

To encourage the use of RDL for blended learning

To share accessible RDL platforms

Blended learning involves the combined use of physical/face to face and remote learning methods. Remote and digital learning utilises different platforms such as radio, television, social media and stored audio and videos for sharing.

Remote and digital learning offers a wide range of benefits especially when faced with losses in learning opportunities and time. Listed below are some of the advantages of embracing **Remote and digital learning**;

- Flexible learning where learners can access content at their own time and space
- Encourages learners to adopt technology for the benefit of learning
- Improves learners mastery of concepts and skills
- Usable as a catch up plan, for remediation and revision purposes
- Learners are exposed to diverse methodologies and approaches
- Usually short enough to learners' attention span
- Some are interactive, allowing learners to ask questions and make comments
- Usually uses the laissez faire approach which creates a favourable atmosphere for play learning

Given below are some of the access links to the RDL offerings available.
