

To: Teachers and subject advisors (Recovery)

Message Objective(s): To enable teachers consolidate the key concepts covered in the previous term and ensure smooth progression with in-depth skills mastery is achieved.

Message:

Learners are returning for the term 4 school calendar and thorough preparation is advised among the teachers. It is recommended that extensive item analysis on the formal tasks is done particularly on transformation geometry, geometry of straight lines and construction of geometric figures which are a challenge to most learners in grade 7-9. Teachers should prepare more practice activities on the topics to ensure they are well versed with and are able to apply the critical skills when answering questions. Subject advisors are encouraged to support on how item analysis should be done to develop consolidation activities. Where possible provide exemplar question items to compliment what teachers have to ensure successful interventions are achieved. Please refer to the RPAT exemplars for items on the above topics. Remember focus on learning recovery is about teaching, assessing, diagnosing and remediation.
