

To: Teachers and subject advisors

Topic: Consolidation on core knowledge and skills for the term

Message Objective(s):

To enable teachers expose learners on the core knowledge and skills covered during the term through administration of a skills mastery assessment practice activity.

Message:

Teachers need to develop some diagnostic skills mastery assessments for learners to practice at home during the school holiday to check on the concepts they grasped during the term. The skills' mastery should address common errors that were identified so that it helps to close the identified gaps on the topics covered in the term. Inclusion of word problems is suggested to improve learners' skills of reading with understanding, apply conceptual understanding, strategic competencies and problem solving. The focus of rebooting should be to assess, diagnose and remediate to ensure that learners are adequately prepared for the subsequent term in terms of skills, knowledge, attitudes, and values.
